

JZ Store Cash API Documentation v1.0

Base URL

`https://cash.free.jzstore.in/api`

Authentication

Use your `user_token` in every request. Keep it secret.

Content Type

`application/x-www-form-urlencoded`

Create Order Endpoint

POST `/create-order`

URL: `https://cash.free.jzstore.in/api/create-order`

Create Order Parameters

`customer_mobile` (required)

`user_token` (required)

`amount` (required)

`order_id` (required, unique)

`redirect_url` (required)

`remark1` (optional)

`remark2` (optional)

Sample Request

`customer_mobile=9876543210`

`user_token=509ffd178aff24dc09640796da90fc22`

`amount=100`

`order_id=ORD97213`

`redirect_url=https://yourwebsite.com/payment-success`

`remark1=User123`

`remark2=Topup`

Success Response

```
{ status:true, message:"Order Created Successfully", result:{ orderId:"1234561705047510",
payment_url:"https://cash.free.jzstore.in/pay/..." } }
```

Common Errors

Order_id Already Exist

Invalid User Token

Invalid Amount

Required Parameter Missing

Check Order Status

POST `/check-order-status`

URL: `https://cash.free.jzstore.in/api/check-order-status`

Status Request

user_token=509ffd178aff24dc09640796da90fc22
order_id=ORD97213

Status Response

```
{ status:"COMPLETED", message:"Transaction Successfully", result:{ txnStatus:"COMPLETED",  
status:"SUCCESS", amount:"100", date:"2024-01-12 13:22:08", utr:"454525454245" } }
```

Transaction Statuses

PENDING, COMPLETED, FAILED, EXPIRED

Integration Flow

1. Generate unique order_id
2. Create Order
3. Redirect to payment_url
4. Customer pays
5. Redirect back
6. Verify using Check Order Status API
7. Deliver product if COMPLETED

Best Practices

Always verify payment using Check Order Status before delivering products. Never expose user_token. Use HTTPS. Store transaction logs. Ensure order_id is unique.
